

## Unlocking Value in Brazil's Emerging Alta Floresta / Juruena Gold - Copper Belt

*As a first mover in one of Brazil's most prospective and underexplored mineral belts, Altamira has secured over 300,000 hectares across several properties – with 3 high-priority projects: Cajueiro, Apicás, and Santa Helena*

- *Historic placer gold production in the belt is estimated at 7 – 10 million ozs.*

Led by an experienced management team with 4 significant Brazilian gold discoveries totalling over 5Moz of resources

Basic Shares Outstanding: 99.0 M

TSX-V: ALTA | FSE: T6UP | OTC Pink: EQTRF

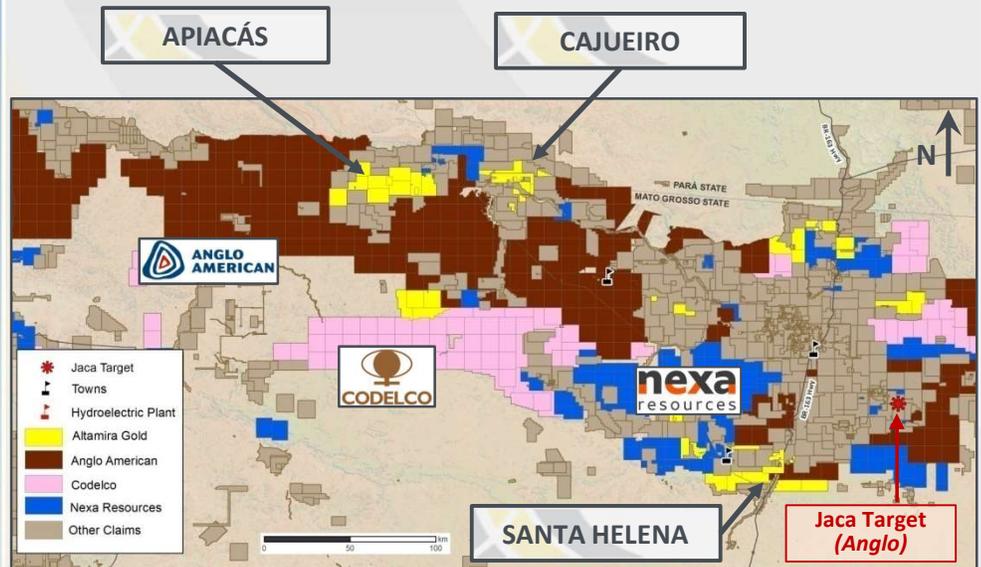

*Altamira is the only junior of scale in the belt, with multiple major mining companies having acquired surrounding land positions in recent years*

**Current Resource Base**

M&I: 185,000 oz Au  
 Inferred: 515,000 oz Au  
 Total: 700,000 oz Au

*Multiple high-grade targets with significant resource upside*

★ **Cajueiro**

- Cajueiro is Altamira’s most advanced property, with over 14km of drilling across 105 holes, and over 4km of trenching completed to date across the 39,053-hectare claim package
- Recently-updated resource estimate in 2019 of 700koz of gold contained (MI&I)
- Bulk Sampling Licenses for trial mining received

★ **Apiacás**

- The highly-prospective Apiacás land package consists of properties covering 7 primary target areas and over 80,000 hectares
- None of these targets has ever been drilled out; trenching has returned consistent values of +5g/t
- Near-term focus is the Mutum target, with widespread disseminated mineralization at surface

★ **Santa Helena**

- Santa Helena is located in the south-eastern portion of the belt and covers 58,000 hectares
- Close proximity to Anglo’s newly-discovered Jaca target, which demonstrated the area’s potential to host significant copper porphyry deposits, and kicked off a staking rush by major companies
- Property has never seen any prior drilling

*Anglo’s Jaca discovery*
