

**Focused on developing gold and copper assets on the underexplored Alta Floresta/Juruena belt of central Brazil.**

**Experienced Management Team**

4 gold discoveries in Brazil with NI 43-101 compliant resources totaling +5Moz

**Brazil focus**

Company projects comprising +200,000ha in prolific Juruena gold belt (historic 7–10M oz of artisanal gold production), now with copper porphyry potential

**Advanced Cajueiro project**

NI 43-101 compliant Indicated Resources of 214,000oz Au and Inferred Resources of 204,000 oz Au and an additional 79,000 oz in oxides (obtained from drilling prior to 2013)

**In 2017, discovered Baldo East zone with high-grade** trench results and since have discovered seven high-grade structures with a cumulative strike length of more than 4km

November 2018

## Alta Floresta /

### Juruena:

## South America's next major copper belt?

- Major companies, including Anglo American and Nexa staked 3M hectares of claims throughout Juruena Belt in late 2017. Codelco staked 800,000 hectares most recently
- A potentially significant copper porphyry discovery by Anglo American at Jaca on eastern side of belt led them to actively drill & are currently flying district-scale airborne surveys
- Altamira has over 200,000 prime hectares and is the only junior on the belt

## Cajueiro Project, Pará State, Brazil

- Historic placer gold workings previously produced +250,000oz Au
- NI 43-101 compliant resource based on 11,292m of drilling – 8.64Mt at 0.77 g/t Au (for 214,000oz) of Indicated resources and 9.53Mt at 0.66g/t Au (for 204,000oz) in the Inferred resource category and additional 1.37Mt at 1.61 g/t in Oxides (for 79,000oz)
- Extensive exploration work carried out since resource
- Seven new high-grade zones discovered at Baldo East during 2017 – i.e. 6m @ 21.7 g/t in Trench 20 and 29m @ 3.03 g/t in Trench 28
- Soil sampling has identified 10 gold anomalies of which 4 have been only partially drill tested. Further trenching/drilling planned aimed at updating current resource calculation
